PROFESSIONAL SUMMARY

Software Engineer with over 6 years of experience designing, configuring, supporting, and enhancing Warehouse Management Systems (WMS) across global fulfillment networks. Strong background in HighJump and Manhattan support, SQL development, root cause analysis, system integrations, and operational workflow optimization. Experienced in partnering with Operations and non-technical stakeholders to translate complex business requirements into scalable technical solutions. Proven track record of improving system performance, resolving systemic production issues, and supporting multi-site warehouse environments.

CORE SKILLS

WMS & Logistics Systems: HighJump & Manhattan support, outbound systems, returns & recovery workflows, warehouse operations support
Languages & Frameworks: JavaScript, TypeScript, React, Redux, Node.js, PHP
Back-End / Databases: PostgreSQL, SQL Server, SQL query optimization, stored procedures, API troubleshooting
Integrations & APIs: REST APIs, OAuth integrations, system interface support
DevOps / Monitoring: Docker, Jenkins, Kibana, DataDog, observability tools
Tools & Systems: Jira, Confluence, ServiceNow, PagerDuty
Specialties: Root cause analysis, production incident resolution, business process documentation, system optimization, cross-functional collaboration, multi-site support

PROFESSIONAL EXPERIENCE

Software Engineer – Inventory Quality & Recovery

Wayfair | June 2025 – January 2026

- Served as a permanent Critical Rotations Engineer supporting QC, returns, inventory, and reverse-logistics systems across 18+ fulfillment centers.
- Resolved 30+ engineering tickets per month across HighJump WMS, Manhattan, QC apps, inventory systems, and returns platforms.
- Owned triage and resolution for high-impact incidents, including 3+ quarterly escalations tied to $100K+ operational or financial exposure.
- Debugged production defects using SQL, DataDog, Kibana, Grafana, Postman, logs, dashboards, REST APIs, SQL Server, Postgres, and IntelliJ.
- Delivered code fixes, deployed production changes, and scoped cross-team engineering work for recurring platform and workflow issues.
- Isolated a returns software feature gap, causing roughly 40 hours of manual adjustment work per week per fulfillment center.
- Led the fix from first-touch investigation through scoping, PM design review, operations collaboration, deployment, and production validation.
- Built and supported Java, Python, Node, REST API, and React/TypeScript systems, improving defect detection, recovery automation, and inventory accuracy.

Global WMS Application Support Engineer

Wayfair | April 2022 – June 2025

- Supported HighJump WMS production applications across 18+ fulfillment centers, resolving warehouse-impacting issues in outbound, inventory, and returns workflows.
- Triaged and resolved 160+ production defects annually using SQL, Kibana logs, DataDog dashboards, system monitoring, and cross-application debugging.
- Diagnosed recurring WMS issues by tracing data inconsistencies, workflow failures, interface errors, and system behavior across fulfillment-center operations.
- Authored production fixes and workflow improvements that reduced repeat defects and improved stability across outbound, inventory, and reverse-logistics processes.
- Validated WMS integrations with internal platforms by troubleshooting interface failures, confirming data persistence, and protecting inventory data integrity.
- Built advanced SQL reports and operational queries to support fulfillment-center decision-making, performance monitoring, defect analysis, and issue resolution.

- Partnered with warehouse Operations leadership to gather business requirements, document workflow gaps, and translate process issues into system improvements.
- Led production escalations by coordinating with engineering, operations, and vendor teams while communicating issue status, risk, and resolution timelines.
- Mentored 15+ junior engineers by improving SOPs, documenting repeat issue patterns, and creating knowledge-sharing processes for WMS support workflows.

Warehouse IT Support Engineer
Wayfair | March 2019 – March 2022

- Tier 1 for the Application Support Engineering team supporting over 14 fulfillment centers and 40 final-mile facilities.
- Supported warehouse hardware, networking, automation, and infrastructure systems at 2 campus fulfillment centers.
- Managed over 300 Android devices running WMS software using Intune and
- Led site audits and ensured systems met operational performance standards.

SELECTED PROJECTS

ForkLine (Multi-Tenant B2B SaaS | Restaurant Ordering Platform) | forklines.com

- Architected and built a full-stack multi-tenant SaaS application using React 18, TypeScript, and Express 5, with a Vite-powered client and shared Zod schemas enforcing type safety across client and server boundaries.
- Designed and implemented a PostgreSQL-backed data layer using Drizzle ORM with versioned schema migrations; all prices stored as integer cents to prevent floating-point precision errors in financial calculations.
- Integrated three third-party APIs — Nash (DoorDash Drive delivery orchestration), Stripe (subscription billing + webhook verification), and Twilio (SMS order notifications)

SoundSink (Full-Stack Personal Project) | soundsinkapp.com | GitHub

- Designed and developed a full-stack web application enabling users to stream, organize, and synchronize audio playlists.
- Built front-end with React and TypeScript using Redux for state management and scalable UI design.
- Developed back-end services in Node.js with PostgreSQL to persist and transform application data.
- Implemented API integrations with Spotify and Apple Music to synchronize external systems and manage data flows.
- Deployed using Docker and CI/CD pipelines for automated builds and system reliability.
- Improved application performance through query optimization, caching, and API efficiency improvements.

EDUCATION

Associate of Science – Computer Science
Norco College | Norco, CA
